Subject: IMAC- Follow-up - Password Policy: Validation; Addition of Palo Alto Password Requirement

I know the CISO has sent you tasking to improve password complexity, and we need to verify password complexity on the Palo Alto Firewall and other servers.

Please screenshot the error message on Linux, Windows, and Palo Alto after you attempt to enter a password that does not match the complexity requirements.

Lock a new user out by incorrectly typing the password 5 times on Linux, Windows, and the Palo Alto firewall.

Screenshot the logs for each showing a user locked out following 5 incorrect password attempts.

Submit all of these screenshots in a business memo. If you cannot meet these requirements, please explain the challenge or issue.

Thank you.

Aii CEO
