Subject: INFI - Web Page Security

A number of organizations in our industry have had their web presence defaced. This causes considerable embarrassment and confusion with our customers.
We need to be able to quickly detect when our web pages have been modified so we can determine if this is unauthorized access.

Develop a technical solution that will monitor our web page content, and alert the Infrastructure Support staff of any changes.

Respond with a business memo that describes your solution. Be specific. If you developed a script, then show a screen shot of that configured script and how it is implemented such that it is frequently monitoring our pages.
If you used a software product, identify that product and show screenshot to document its installation and verify its functionality.

Thank you.

IT Director
