Subject: HDSC - Implement SSH Services

It has come to our attention that some systems are configured for remote management. This constitutes a serious security risk to the organization.

Improve the security on those servers and network devices by enabling and securing their remote management with SSH/RDP on all servers and assuring all telnet services are disabled. If not possible, document why not.

Please report when this task is completed, using a business memo. Include in your report: 1) the text of the SSH configuration, 2) Proof that telnet is disabled.

Thank you.
